Objective

Laravel web developer with 2 years of experience specializing in backend API development. Skilled in building scalable and secure applications with a strong foundation in PHP and Laravel. Currently expanding expertise in Flutter and React to enhance full-stack development capabilities.

Experience

Tamilzorous private limited

Laravel web developer, API developer

Laravel Web Developer

- Developed and maintained scalable web applications using Laravel and PHP.
- Designed and implemented RESTful APIs to integrate frontend applications with backend services.

Backend API Developer

- Built and documented RESTful and GraphQL APIs for web and mobile applications.
- Ensured API security with JWT authentication and role-based access control.

Other Experience

- Built a simple Flutter mobile app for personal projects, integrating REST APIs.
- Developed basic React components to improve understanding of frontend development.

Education

Government boys higher secondary school, vanavasi

2016-2017

10th

89.20%

Government boys higher secondary school, vanavasi

2018-2019

12th(Maths Computer)

80.66 %

Anna university / AVS Engineering College, Salem

2019-2023

BE (COMPUTER SCIENCE AND ENGINEERING)

8.83 CGPA

Skills

- PHP(Laravel, Codeigniter)
- HTML, CSS, JS, Bootstrap, Tailwind css,
- React, Vue, Angular,
- UI/UX Designing
- MYSQL, SQL, POSTGRESQL
- Flutter

Achievements & Awards

- Outstanding performance award of "SCIENTIA-20"
- National player in Hockey

Languages

- Tamil, English, Kannada

Projects

HOSTEL MANAGMENT SYSTEM

A hostel management system automates room allocation, fee collection, and student records management. It simplifies hostel operations by centralizing essential tasks.

Textile Management System – REST APIs

Technologies Used: Laravel (PHP)

Project Overview:

Developed a comprehensive Textile Management System that streamlines the entire textile production process, from raw material procurement to sales tracking.

Key Features & Responsibilities:

- Raw Material Procurement: Managed the purchasing and tracking of raw yarns.
- Production Process Management: Implemented modules for dyeing, winding, and weaving tracking.
- Weaver & Inventory Management: Monitored weavers' production and maintained real-time stock levels.
- Sales & Order Processing: Integrated a sales tracking system to manage customer orders and invoices.
- REST API Development: Designed and implemented secure and scalable REST APIs for data exchange between the desktop application and external services.
- User-Friendly Interface: Developed an intuitive desktop interface for efficient workflow management.
- Reporting & Analytics: Enabled data-driven decision-making through detailed reports on production, stock, and sales.

This project enhanced automation, reduced manual errors, and improved operational efficiency in textile manufacturing.

● Healthcare Management System – REST APIs

Technologies Used: Laravel(PHP), Payment Gateway, OneSignal Notification

Project Overview:

Developed a comprehensive healthcare management system that facilitates end-to-end patient care, from appointment scheduling to video consultations, lab tests, prescriptions, and payments.

Key Features & Responsibilities:

- Patient Appointment Scheduling: Implemented a seamless booking system for video consultations.
- Pharmacy & Lab Management: Integrated workflows for care managers to conduct blood and urine tests and submit health reports.
- Doctor Consultation Module: Enabled doctors to review lab results, provide video consultations, and generate digital prescriptions.
- Care Plan Management: Implemented care plan purchases, usage tracking, and patient engagement.
- Prepaid Card System: Developed a prepaid card module for hassle-free payments.
- Payment Gateway Integration: Integrated secure online payments for services and care plans.
- OTP Authentication & Security: Implemented OTP-based verification for user authentication.
- Push Notifications: Used OneSignal for real-time alerts and updates.
- REST API Development: Built scalable APIs for smooth communication between mobile, desktop, and backend services.

This project enhanced digital healthcare accessibility, improving patient-doctor interactions and streamlining pharmacy and lab processes.

● Websites & Inventory Software Development

- Developed textile and two college websites with user-friendly interfaces and fully responsive designs, ensuring seamless functionality across all devices.
- Built warehouse and inventory management software for steel and e-commerce companies, optimizing stock management, order processing, and inventory tracking for improved operational efficiency.
